## 1. New Lab Premises in Eupen

Since December 2011, our lab has been completely renovated. We didn't just paint the walls but also invested in new testing machines. At Kabelwerk, every foam production is inspected in detail. Tests on hardness, density, compression set, several types of durability,... are made following ISO standards in order to reach our ...

## 2. REMINDER: new delivery system for ES, PM, ASH, HR38 & HR40

In order to keep an attractive price for these qualities, they will only be delivered as soon as a quantity of 56 meters will be reached (grouped order). This means that the delivery times for those qualities are not guaranteed as for standard qualities and has to be confirmed by our sales team. #### 4. New building & new facilities

Since several months now, our bloc handling is performed by a fully automated system. Thanks to this system, 3 different material flows can be supplied automatically with blocs after being transported through our shuttles.

This investment needed a new building to be build and in terms of saving spaces we decided to add a second level which allows to stock up to 50% more “long blocs”.

This investment provides more flexibility and increased our capacity so that our customers still enjoy world class foam with a customer related premium service.
